## OPIA SURGICAL MASK HIGH R GROUP

OPIA is proud to announce the enhancement of our surgical mask performance class. Our latest addition, the OPIA HIGH R family, offers 3 and 4 ply surgical masks that provide improved convenience, comfort, and reliability. Our commitment to research and development has enabled us to create a highly advanced line of surgical masks that meet the most stringent industry standards. With the OPIA HIGH R family, healthcare professionals can trust that they are receiving the highest level of protection and comfort available on the market.

### Highest Standards of protection and breathability

At Opia Surgical, we are committed to delivering high-quality and reliable products that meet the highest protection standards. Our surgical masks are designed to offer exceptional comfort while providing the highest level of protection against harmful bacteria, both during and after the pandemic. We strive to meet the needs of individuals who seek reliable protection against all harmful bacteria.

The OPIA High R mask is designed to provide greater comfort and protection compared to standard surgical masks that are currently used to prevent surgeons and healthcare technicians from inhaling surgical smoke during procedures. Additionally, it offers highly effective protection against bacteria, viruses, and other airborne diseases in the high-risk areas of hospitals, commonly referred to as the yellow and red zones. In surgical procedures performed under a microscope, the mask minimizes the formation of fog on glasses, microscopes, and other protective equipment. Overall, the advanced features of the OPIA High R mask make it a valuable tool in modern surgical practices.

### European standard EN 14683 medical face mask requirements

Opia's line of face masks is engineered, designed, and tested to comply with the European standard EN 14683. These masks undergo stringent testing for bacterial filtration efficiency, differential pressure, splash resistance, and microbial cleanliness to ensure their safety and effectiveness before they are released to the market. The "High R," "High RII," and "High RIII" models in the OPIA HIGH R family have successfully passed the EN 14683 tests, meeting the European standards. Additionally, these masks are latex-free and provide a wide range of surgical face masks to choose from.

## OPIA High-R-Mask

### Product Description :

High R face masks are designed for use in patient care procedures where there is a potential for surgical intervention or biological exposure. These masks provide a high level of protection against liquids and are suitable for long procedures. To increase comfort and protection levels, different options are available, eg shield, anti-fog tape. High R face masks are also available with ties and ear loops.
